Curiosis (494120)

A clear beneficiary of global lab automation

- Curiosis provides live-cell imaging systems and automated colony pickers—mission-critical laboratory automation equipment—to leading global clients under an ODM arrangement.
- Leveraging continuous product innovation and strong price competitiveness, the company is gaining momentum in expanding its product portfolio and geographic footprint.

WHAT'S THE STORY?

A robust bridge to laboratory automation: Founded in 2015 by a mechanical engineering graduate from Seoul National University, Curiosis went public on the Kosdaq in Nov 2025. The company specializes in developing and manufacturing core components for laboratory automation, supplying which it supplies directly to customers or commercializes as finished products under its own brand or via ODM partnerships. Its core technological strength lies in precision motion systems that minimize physical damage during cell observation and extraction. Its flagship product, the Celloger Pro, enables real-time, non-invasive monitoring of live cells within an incubator—eliminating the traditional manual process of removing culture plates, observing them under a microscope, and returning them. With ultra-low power consumption and temperature control within ±0.1 °C, the Celloger Pro ensures no physical or chemical disturbance to samples during continuous observation. In Apr 2024, Curiosis entered into a comprehensive strategic partnership with global life sciences equipment leader Revvity, supplying the Celloger Pro under an ODM arrangement. Curiosis is also expanding its automation lineup with complementary products such as the CPX colony picker and the Cellpuri cell concentration chip, aiming to offer a complete end-to-end laboratory automation solution.

Strong distribution channels and strategic capacity expansion: The Celloger Pro is currently supplied to Revvity under a three-year volume commitment, with initial shipments of 20 units from Aug 2025, 30 units from Aug 2026, and 40 units from Aug 2027. Historically, live-cell imaging systems cost over KRW300m, making them inaccessible to small labs. Curiosis' products, priced from KRW20m to KRW150m, enable broad adoption across small, medium-sized, and large research facilities. The firm currently has sufficient production capacity to support KRW100b in annual sales, and it plans to double this to KRW200b by 1H27. This year, Curiosis aims to reach breakeven on full-year sales of KRW14b. With continuous vertical integration of key components driving gross margin expansion—from 41% in 2024 to 58% in 3Q25—the company is poised to benefit from significant operating leverage as sales scale.

Financial position and risks: Curiosis raised KRW26b in IPO proceeds. Excluding KRW7.3b in capex, annual SG&A expenses remain around KRW10b, suggesting limited near-term need to raise additional capital. Shares currently under lock-up will be released as follows: 1) 910,000 shares (14.3%) on Feb 13, 2026, after a 3-month lock-up; 2) 700,000 (11%) on Nov 13, 2026, after a 1-year lock-up; and 3) 1.3m shares (21%) on Nov 13, 2028, after a 3-year lock-up.
